

Project: Cucina Vostra Pizza Ordering Mobile Application (Android and IOS BASED)

Project Client: **Cucina Vostra Pizza Ordering**

Email: xpaustralia@gmail.com

Phone: 0432331416

Time Frame: 13 weeks

Users:

1. Admin(1-2) – Admin is able to make changes in the item list and price, other features such as out of stock, On sale, Discount vouchers and so on.
2. Employees (Many): Can update the status of the orders.
3. User's(Many) – Application with the unique ID's can be used by the user to buy the Pizza, expected time will be advised after receiving the order, pay instantly and receive notifications, discount vouchers. Users are able to customize their Pizza and price will be reflected based on additions.

Note: No Other User has access to the Application.

Problem Statement: Users usually call the companies to order their Pizza but due to increase in the volumes of calls user has to wait for a long period of time.

Requirements:

- Mobile App will help user to place the order using their Geographical Relocation and their app Id & details will help the user for order their customized Pizza.
- Users are able to customize their order and place their order through Application. User can also check their history of orders using the Application and place the same order again.
- Application can provide the notification about expected time to complete the order made by the user.
- Admin can list, edit, and delete any item in their store.
- A transaction will occur before the order is confirmed.
- User will be able to get the notifications on new deals, or they can buy new e-coupons.
- The Admin user can send some Notifications to their clients only. Clients will be notified using their app notifications.

- E-Coupons/Gift Cards Terms and Conditions
- e-Coupons can only be redeemed during the purchase
- All e-Coupons expire within a time frame (specified by the Admin) and cannot be extended
- e-Coupons cannot be refunded or used in conjunction with any other offer
- Any other Functionality can be discussed.
- Content Management System has to be developed on a responsive web platform using Open Source Technologies, For example: PHP, SQL.
- Data (sales) analytics dashboard to see data in real-time
- Social media integration

- A HOSTING ACCOUNT WILL BE GIVEN TO THE TEAM ONCE THE TEAM IS READY TO UPLOAD THE INFORMATION.
- ERRORS SHOULD BE HANDLED APPROPRIATELY.
- DATABASE SHOULD BE SCALABLE AND EFFICIENT TO USE.
- FRONT END SHOULD BE USER FRIENDLY AS SOME OF THE USERS DOES NOT KNOW HOW TO USE THEIR PHONES.
